Abstract

This project presents the comprehensive development of a real-time Netflix Clone website is featured with we give user to access to best-in class TV series, feature films. Netflix Clone contains Higher-Quality shows and movies, our members control what they want to watch, when they want it, they can freely access the movies, TV series.

How to use

Login: User need to login to website which gives access to User to watch Movies, TV Shows.

Sign up: New users need to registration, new user need to provide the information Gmail, Password, and supplementary details as necessary.

Users Screen: Upon successful authentication or registration, users are presented with dashboard list of available Movies and TV shows, User can easy watch anything by clicking on what they like to watch.

By this process the user can get into a website and can enjoy the watching movies and TV shows, recently watched movies are also displayed. Not only Movies it contains cartoons, anime movies which children like to watch.

Key Features

1. **User-friendly interface**: The website should have a clean and good userflow , making it easy for users to navigate through the different Movies and Shows, search for Movies, and Watch Movies and Shows.

2. **Search functionality:** The website should have search option where user can easy search only they need and time saving.

3. **Filter:** User can freely filter the movies and TV shows, children favourite cartoons, anime, Family movies and shows.

4. **Recently Watched:** User can easily find watch they recently watched instead of searching again.

5. **Reviews and Ratings:** Users can be able to know ratings and reviews about movies or show, also can able to write there reviews and can also rate the movie or shows, allowing others to make informed decisions about their choices.
